## ***The Oregon Nurse Retention Project: Acknowledgements***

The research presented in this report was supported by a grant from the Northwest Health Foundation (Proposal 14180) to Portland State University. We are grateful to the Northwest Health Foundation (NWHF) for supporting this work, particularly Judith Woodruff who helped focus the research on critical topics and who encouraged us to choose certain paths that ultimately led to some important discoveries. Our research team is now pursuing several lines of research that would not have been possible without NWHF support. Several staff members at both the Oregon Nurses' association and Portland State University have been extraordinarily helpful in managing the financial and logistical aspects of the study, particularly Anh Ly at Portland State and Pisith Kong at ONA. Finally, and most importantly, we deeply appreciate the help of all of the nurses who contributed to the research, including those who participated in focus groups that helped us develop and refine the survey instruments and the study participants, who took a great deal of time out of their busy lives to tell us about their work. We hope we can honor their contributions by using this research to help create a healthier workplace for nurses in the future.
